

Earn College Credit While Attending High School!

Through agreements with Idaho postsecondary institutions, high school students may receive college credits while taking classes at the Meridian Technical Charter High School. They can apply these college credits towards technical certificates, associate degrees, and/or bachelor's degrees

Students have three options for receiving these credits:

1) *Concurrent Enrollment (CE); The college or university partners with the high school to provide college credits for collegiate-level classes offered at the high school. Credits are offered at a significant reduced rate (Most colleges charge \$65 per credit). With concurrent enrollment courses the focus is aligning the high school curriculum to the college curriculum.

2) *Tech Prep/Dual Enrollment (TP/DE): Tech Prep is a national technical and academic postsecondary preparation program that focuses on aligning the competencies that students achieve while in high school with the same competencies that students achieve in similar college programs. The Tech Prep/Dual Enrollment option allows students to receive their credits on an official college transcript, while they are still in high school. Students efforts, and by having the grades recorded on an official transcript, the credits are portable and may be transferred to other colleges and universities. Each institution charges a small transcription fee ranging from \$10-\$21 per credit.

3) Tech Prep/Articulated Credit (TP/AC): Students may choose to attend either institution in the selected tech prep program area. After they have graduated from high school, they have up to two years to take advantage of their agreement. After they have successfully completed the first semester of their postsecondary technical program, the college credits they earn while in high school will be posted to their college transcripts as pass/fail credits.

**It is always up to the receiving college or university what credits will be accepted toward the student's degree requirements.*
